

Q28-100G-LR4X2-AO

MSA and TAA 2x100GBase-LR4 QSFP28-DD Transceiver (SMF, 1295nm to 1309nm, 10km, 2xCS, DOM)

Features

- Supports 206Gbps
- 8x25G electrical interface
- Dual CS Connector
- 8x25Gbps DFB-based LAN-WDM transmitter
- PIN and TIA array on the receiver side
- Single-mode Fiber
- Commercial Temperature 0 to 70 Celsius
- RoHS-6 compliant and Lead Free
- I2C interface with integrated Digital Diagnostic Monitoring
- Single +3.3V power supply and power dissipation

Applications

- 200GBase Ethernet
- Access and Enterprise

Product Description

This MSA Compliant QSFP28-DD transceiver provides 2x100GBase-LR4 throughput up to 10km over single-mode fiber (SMF) using a wavelength of 1295nm to 1309nm via a 2xCS connector. It is built to MSA standards and is uniquely serialized and data-traffic and application tested to ensure that they will integrate into your network seamlessly. Digital optical monitoring (DOM) support is also present to allow access to real-time operating parameters. This transceiver is Trade Agreements Act (TAA) compliant. We stand behind the quality of our products and proudly offer a limited lifetime warranty.

AddOn's transceivers are RoHS compliant and lead-free.

TAA refers to the Trade Agreements Act (19 U.S.C. & 2501-2581), which is intended to foster fair and open international trade. TAA requires that the U.S. Government may acquire only "U.S. – made or designated country end products."

Absolute Maximum Ratings

| Parameter | Symbol | Min. | Typ. | Max. | Unit |
|-------------------------------------|--------|------|------|------|------|
| Maximum Supply Voltage | Vcc | -0.5 | | 3.6 | V |
| Storage Temperature | TS | -40 | | 85 | °C |
| Operating Case Temperature | Tc | 0 | 25 | 70 | °C |
| Relative Humidity (non-condensing) | RH | 5 | | 85 | % |
| Receiver Damage Threshold, per lane | Rxdmg | 5.5 | | | dBm |

Electrical Characteristics

| Parameter | Symbol | Min | Typ | Max | Unit | Notes | |
|--|--------|--------------------------|-----|-------|-------|---------|--|
| Power Supply Voltage | Vcc | 3.135 | 3.3 | 3.465 | V | | |
| Power Dissipation | Pd | | | 8 | W | | |
| Instantaneous peak current | Icc_ip | | | 3200 | mA | | |
| Sustained peak current | Icc_sp | | | 2640 | mA | | |
| Steady state current | Icc | | | 2308 | mA | | |
| Transmitter | | | | | | | |
| Differential data input swing per lane | | | | 900 | mVp-p | | |

|---------------------------|------|------|--|-----|-----|---|
| Stressed J9 Jitter | J9 | 0.47 | | | UI | 8 |
| LOS Assert | LOSA | -25 | | | dBm | |
| LOS De-Assert | LOSD | | | -12 | dBm | |
| LOS Hysteresis | | 0.5 | | | dB | |

Notes:

1. Average launch power, each lane (min) is informative and not the principal indicator of signal strength. A transmitter with launch power below this value cannot be compliant; however, a value above this does not ensure compliance.
2. Even if the TDP < 1.0dB, the OMA (min) must exceed this value.
3. Transmitter reflectance is defined looking into the transmitter.
4. Hit ratio of 5×10^{-5}
5. Average receive power, each lane (min) is informative and not the principal indicator of signal strength. A received power below this value cannot be compliant; however, a value above this does not ensure compliance.
6. Receiver sensitivity (OMA), each lane (max) is informative.
7. Measured with conformance test signal at TP3 for BER = 10^{-12} .
8. Vertical eye closure penalty, stressed eye J2 Jitter, stressed eye J9 Jitter are test conditions for measuring stressed receiver sensitivity. They are not characteristics of the receiver.

| 76 | | GND | Ground | 1A | 1 |

Notes:

1. QSFP-DD uses common ground (GND) for all signals and supply (power). All are common within the QSFP-DD module and all module voltages are referenced to this potential unless otherwise noted. Connect these directly to the host board signal-common ground plane.
2. VccRx, VccRx1, Vcc1, Vcc2, VccTx and VccTx1 shall be applied concurrently. Requirements defined for the host side of the Host Card Edge Connector are listed in Table 4. VccRx, VccRx1, Vcc1, Vcc2, VccTx and VccTx1 may be internally connected within the module in any combination. The connector Vcc pins are each rated for a maximum current of 1000 mA.
3. All Vendor Specific, Reserved and No Connect pins may be terminated with 50 ohms to ground on the host. Pad 65 (No Connect) shall be left unconnected within the module. Vendor specific and Reserved pads shall have an impedance to GND that is greater than 10 kOhms and less than 100 pF.
4. Plug Sequence specifies the mating sequence of the host connector and module. The sequence is 1A, 2A, 3A, 1B, 2B, 3B. (see Figure 2 for pad locations) Contact sequence A will make, then break contact with additional QSFP-DD pads. Sequence 1A, 1B will then occur simultaneously, followed by 2A, 2B, followed by 3A,3B.

Mechanical Specifications

About AddOn Networks

In 1999, AddOn Networks entered the market with a single product. Our founders fulfilled a severe shortage for compatible, cost-effective optical transceivers that compete at the same performance levels as leading OEM manufacturers. Adhering to the idea of redefining service and product quality not previously had in the fiber optic networking industry, AddOn invested resources in solution design, production, fulfillment, and global support.

Combining one of the most extensive and stringent testing processes in the industry, an exceptional free tech support center, and a consistent roll-out of innovative technologies, AddOn has continually set industry standards of quality and reliability throughout its history.

Reliability is the cornerstone of any optical fiber network and is engrained in AddOn's DNA. It has played a key role in nurturing the long-term relationships developed over the years with customers. AddOn remains committed to exceeding industry standards with certifications from ranging from NEBS Level 3 to ISO 9001:2005 with every new development while maintaining the signature reliability of its products.
