

Veritas NetBackup 5330 Appliance.

High Availability Enterprise Backup Appliance.

OVERVIEW

Veritas NetBackup™ 5330 delivers high performance, scalable capacity, high availability and resiliency to address the most aggressive backup and recovery objectives in the data center while protecting both virtual and physical environments. Built on industry leading NetBackup software, the NetBackup 5330 Appliance is an integrated media server with storage and offers both client and target deduplication to reduce network bandwidth and storage capacity requirements. As an integrated backup appliance, it addresses the OpEx and CapEx challenges organizations face today while preparing to modernize for the future.

The NetBackup 5330 is offered in a High Availability (HA) configuration. The HA configuration increases system reliability, provides higher backup and recovery throughput as well as higher operational availability at significantly lower operational costs.
